Natural Language Processing

Lecture 3: Word Classification and Machine Learning

Semester 1, 2020

School of Computer Science

The University of Sydney, Australia

THE UNIVERSITY OF
SYDNEY

Dr Caren Han

Caren.Han@sydney.edu.au

Lecture 3: Word Classification and Machine Learning

1. **Previous Lecture: Word Embedding Review**
2. Word Embedding Evaluation
3. Deep Neural Network for Natural Language Processing
 1. Perceptron and Neural Network (NN)
 2. Multilayer Perceptron
 3. Applications
4. Next Week Preview

See how the Deep Learning can be used for NLP

 - Text Classification, etc.

Word2Vec Models

CBOW

*Predict center word
from (bag of) context words*

Skip-gram

*Predict context words
given center word*

Word2Vec

Sentence: “Sydney is the state capital of NSW”

Using window sliding, develop the training data

Center word	Context (“outside”) word	
[1,0,0,0,0,0,0]	[0,1,0,0,0,0,0], [0,0,1,0,0,0,0]	Sydney is the state capital of NSW
[0,1,0,0,0,0,0]	[1,0,0,0,0,0,0], [0,0,1,0,0,0,0], [0,0,0,1,0,0,0]	Sydney is the state capital of NSW
[0,0,1,0,0,0,0]	[1,0,0,0,0,0,0], [0,1,0,0,0,0,0], [0,0,0,1,0,0,0], [0,0,0,0,1,0,0]	Sydney is the state capital of NSW
[0,0,0,1,0,0,0]	[0,1,0,0,0,0,0], [0,0,1,0,0,0,0], [0,0,0,0,1,0,0], [0,0,0,0,0,1,0]	Sydney is the state capital of NSW
[0,0,0,0,1,0,0]	[0,0,1,0,0,0,0], [0,0,0,1,0,0,0], [0,0,0,0,0,1,0], [0,0,0,0,0,0,1]	Sydney is the state capital of NSW
[0,0,0,0,0,1,0]	[0,0,0,1,0,0,0], [0,0,0,0,1,0,0], [0,0,0,0,0,0,1]	Sydney is the state capital of NSW
[0,0,0,0,0,0,1]	[0,0,0,0,1,0,0], [0,0,0,0,0,1,0]	Sydney is the state capital of NSW

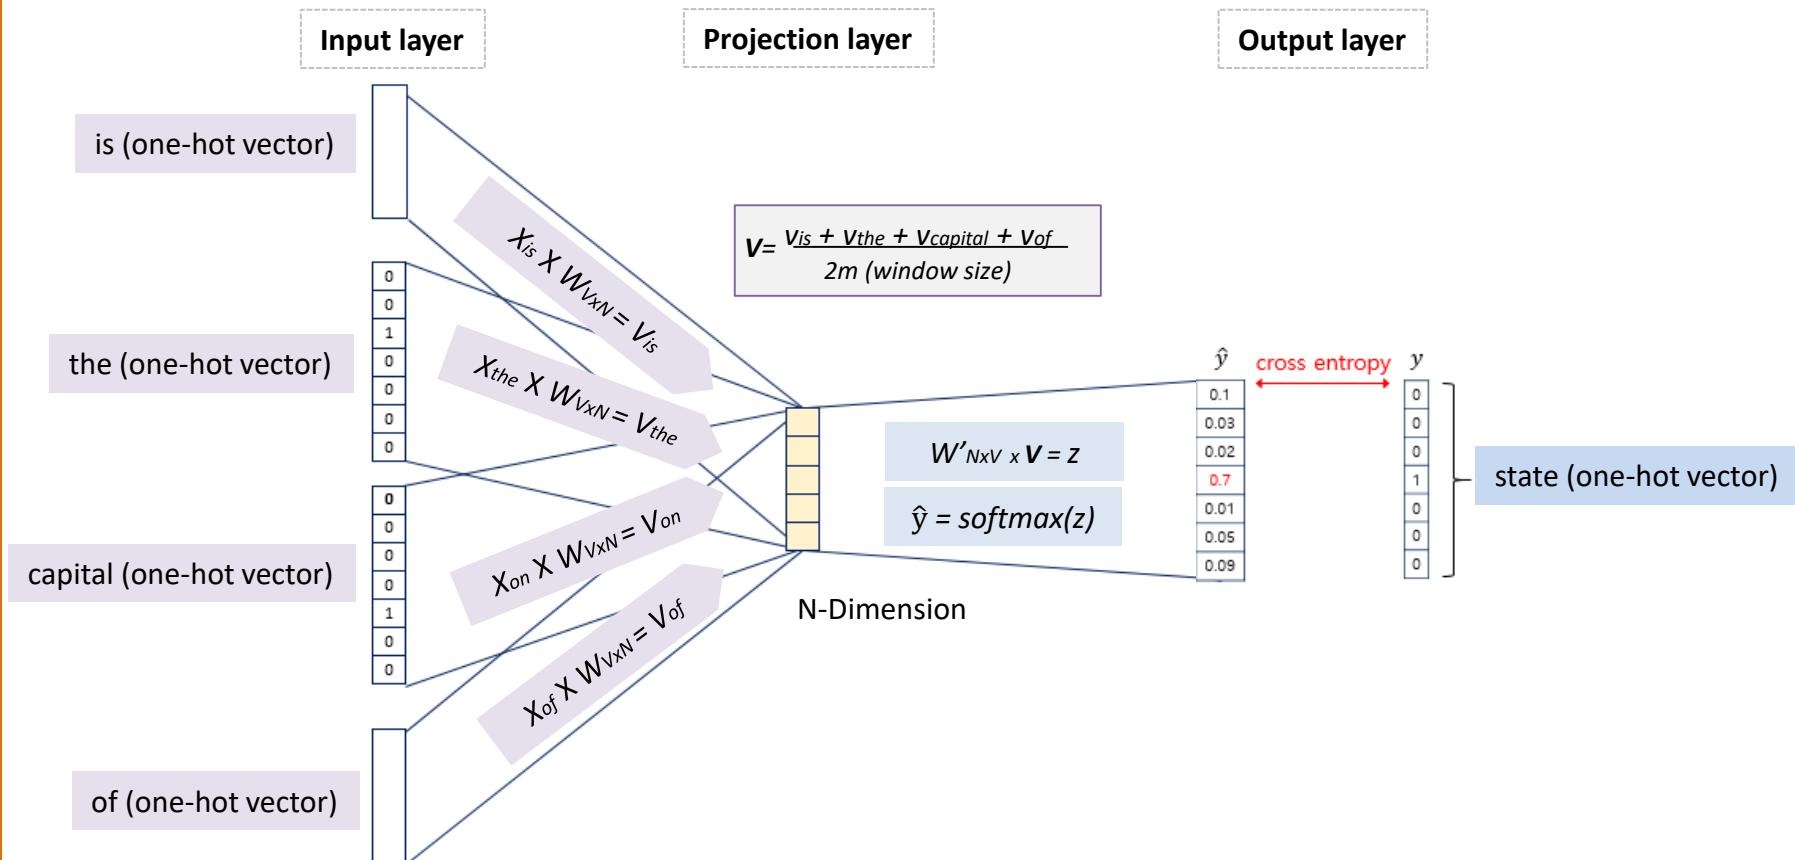

Center word
Context (“outside”) word

Previous Lecture Review

CBOW Process

Predict center word from (bag of) context words

Sentence: “Sydney is the state capital of NSW”

Lecture 3: Word Classification and Machine Learning

How to evaluate word vectors?

Type	How to work / Benefit
Intrinsic	Evaluation on a specific/intermediate subtask
	<ul style="list-style-type: none">• Fast to compute• Helps to understand that system• Not clear if really helpful unless correlation to real task is established
Extrinsic	Evaluation on a real task
	<ul style="list-style-type: none">• Can take a long time to compute accuracy• Unclear if the subsystem is the problem or its interaction or other subsystems

Intrinsic word vector evaluation

Word Vector Analogies

$$a \leftrightarrow b :: c \leftrightarrow ???$$
$$man \leftrightarrow women :: king \leftrightarrow ???$$

- Evaluate word vectors by how well their cosine distance after addition captures intuitive semantic and syntactic analogy questions

Word Embedding Evaluation

Intrinsic word vector evaluation

Word Vector Analogies

King – Man + Woman = ?

No	Dataset	Type	Result
1	TED Script	word2vec CBOW	President
2		word2vec Skip-gram	Luther
3		fastText CBOW	Kidding
4		fastText Skip-gram	Jarring
5	Google News	word2vec CBOW	queen
6		word2vec Skip-gram	queen

Intrinsic word vector evaluation

Evaluation Result Comparison

The Semantic-Syntactic word relationship tests for understanding of a wide variety of relationships as shown below. Using 640-dimensional word vectors, a skip-gram trained model achieved 55% semantic accuracy and 59% syntactic accuracy.

Table 3: *Comparison of architectures using models trained on the same data, with 640-dimensional word vectors. The accuracies are reported on our Semantic-Syntactic Word Relationship test set, and on the syntactic relationship test set of [20]*

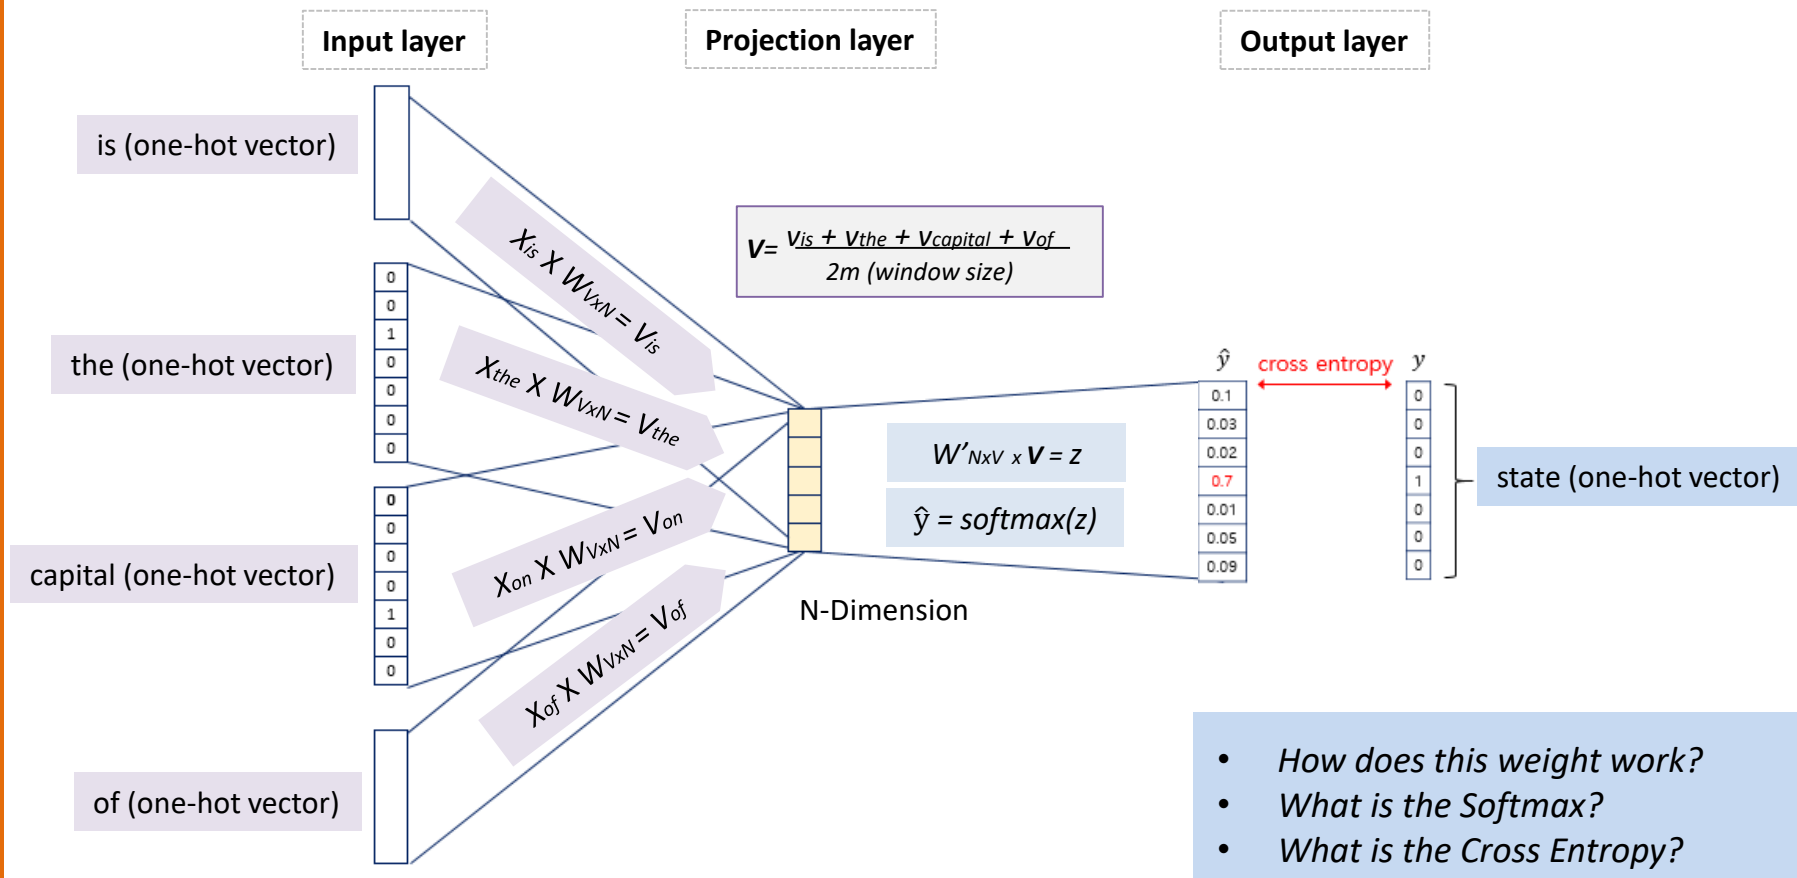

Model Architecture	Semantic-Syntactic Word Relationship test set		MSR Word Relatedness Test Set [20]
	Semantic Accuracy [%]	Syntactic Accuracy [%]	
RNNLM	9	36	35
NNLM	23	53	47
CBOW	24	64	61
Skip-gram	55	59	56

Previous Lecture Review

Deep Learning with Neural Network

Neuron and Perceptron

Deep Learning with Neural Network

Inputs and Outputs (Labels) for Natural Language Processing

x_i	Inputs	Features words (indices or vectors!), context windows, sentences, documents, etc.
y_i	Outputs (labels)	What we try to predict/classify <ul style="list-style-type: none">E.g. word meaning, sentiment, name entity

Deep Learning with Neural Network

Input: x =number of apple given by Lisa

Output: y =number of banana received by Lisa

Parameters: Need to be estimated

Deep Learning with Neural Network - Model

Input: x = number of apple given by Lisa

Output: y = number of banana received by Lisa

Parameters: Need to be estimated

Deep Learning with Neural Network - Model

Input: x =number of apple given by Lisa

Output: y =number of banana received by Lisa

Parameters: Need to be estimated

Guess how much I will
give you back!

Deep Learning with Neural Network - Parameter

Input: x = number of apple given by Lisa

Output: y = number of banana received by Lisa

Parameters: Need to be estimated

Guess how much I will give you back!

$$y = Wx$$

What is W then?

Deep Learning with Neural Network - Parameter

Input: x = number of apple given by Lisa

Output: y = number of banana received by Lisa

Parameters: Need to be estimated

Guess how much I will give you back!

$$y = Wx$$

What is **W** then?

Deep Learning for NLP

Deep Learning with Neural Network - Parameter

Input: x =number of apple given by Lisa

Output: y =number of banana received by Lisa

Parameters: Need to be estimated

Data

x 🍏	y 🍌
1	0
5	16
6	20

$$y = Wx$$

What is W then?

Deep Learning with Neural Network - Parameter

Input: x = number of apple given by Lisa

Output: y = number of banana received by Lisa

Parameters: Need to be estimated

$$y = Wx$$

What is W then?

Deep Learning with Neural Network - Parameter

Input: x = number of apple given by Lisa

Output: y = number of banana received by Lisa

Parameters: Need to be estimated

$$y = Wx$$

What if W is 3?

$$3 = 3 \times 1$$

$$15 = 3 \times 5$$

$$20 = 3 \times 6$$

Deep Learning with Neural Network - Parameter

Input: x = number of apple given by Lisa

Output: y = number of banana received by Lisa

Parameters: Need to be estimated

$$y = Wx$$

What if W is 3.2?

$$3.2 = 3.2 \times 1$$

$$16 = 3.2 \times 5$$

$$19.2 = 3.2 \times 6$$

Deep Learning for NLP

Deep Learning with Neural Network - Parameter

Input: x =number of apple given by Lisa

Output: y =number of banana received by Lisa

Parameters: Need to be estimated

$$y = \overset{\text{weight}}{W} \overset{\text{bias}}{x} + b$$

Weight is not enough...

Deep Learning with Neural Network - Parameter

Input: x = number of apple given by Lisa

Output: y = number of banana received by Lisa

Parameters: Need to be estimated

$$y = \overset{\text{weight}}{W} \overset{\text{bias}}{x} + b$$

How can we find the parameters, w and b ?

3 Deep Learning for NLP

Deep Learning with Neural Network - Parameter

Input: x = number of apple given by Lisa

Output: y = number of banana received by Lisa

Parameters: Need to be estimated

$$y = \overset{\text{weight}}{W} \overset{\text{bias}}{x} + b$$

How can we find the parameters, w and b ?

Deep Learning with Neural Network - Parameter

Input: x = number of apple given by Lisa

Output: y = number of banana received by Lisa

Parameters: Need to be estimated

Model $y = \overset{\text{weight}}{W} x + \overset{\text{bias}}{b}$

How can we find the parameters, w and b ?

Deep Learning for NLP

Deep Learning with Neural Network - Cost

Actual Data

$$y = \text{weight} \cdot x + \text{bias}$$

x 🍎	y 🍌
1	0
5	16
6	20

WAIT! Softmax!!

Deep Learning for NLP

WAIT! Softmax!!

**Depends on the dataset*

Problem type	Last-layer activation	Loss (Cost) function	Example
Binary classification	sigmoid	Binary Cross Entropy	Sentiment analysis (Positive/Negative)
Multi-class, single-label classification	softmax	Categorical Cross Entropy	Part-of-Speech tagging Named Entity Recognition
Multi-class, multi-label classification	sigmoid	Binary Cross Entropy	Multi-topic classification, one can have multiple topics
Regression to arbitrary values	None	MSE (Mean Squared Error)	Predict house price
Regression to values between 0 and 1	sigmoid	MSE or Binary Cross Entropy	Engine health assessment where 0 is broken, 1 is new

Deep Learning with Neural Network - Cost

Actual Data

$$y = \text{weight} \cdot x + \text{bias}$$

x 🍎	y 🍌
1	0

1	1	0	1
5	5	16	121
6	6	20	196

$$C(1,0) = 318$$

Model Ex#2

$$\hat{y} = 2 \cdot x + 2$$

x 🍎	\hat{y} 🍌	y 🍌	$(y - \hat{y})^2$
1	4	0	16
5	12	16	16
6	14	20	36

$$C(2,2) = 68$$

Let's calculate the costs and get the lowest one!

$$\arg \min C(w,b)$$

$$w, b \in [-\infty, \infty]$$

Deep Learning with Neural Network - Optimizer

Actual Data

$$y = \text{weight} \cdot x + \text{bias}$$

x 🍎	y 🍌
1	0
5	16
6	20

Let's calculate the costs and get the lowest one!

$$\arg \min C(w, b)$$

$$w, b \in [-\infty, \infty]$$

Deep Learning with Neural Network - Optimizer

$$y = \overset{\text{weight}}{4} \overset{\text{bias}}{x} - 4$$

x 🍎	y 🍌
1	0
5	16
6	20

The lowest!

$$w, b = 4, -4$$

$$C(w_0, b_0) = 0$$

$$\arg \min C(w, b)$$

$$w, b \in [-\infty, \infty]$$

3 Deep Learning for NLP

Deep Learning with Neural Network - Optimizer

$$y = \overset{\text{weight}}{4} \overset{\text{bias}}{x} - 4$$

x 🍎	y 🍌
1	0
5	16
6	20

Expensive to compute
(hours or days)

$$\arg \min C(w, b)$$

$$w, b \in [-\infty, \infty]$$

Finding the Optimal weight and bias – Gradient Descent

There are different types of Gradient descent optimization algorithms: Batch Gradient Descent, Stochastic Gradient Descent, Momentum, Adam, etc.

Finding the Optimal weight and bias – Gradient Descent

There are different types of Gradient descent optimization algorithms:
Batch Gradient Descent, Stochastic Gradient Descent, Momentum, Adam, etc.

Finding the Optimal weight and bias – Gradient Descent

***There are different types of Gradient descent optimization algorithms:
Batch Gradient Descent, Stochastic Gradient Descent, Momentum, Adam, etc.***

Choose the optimal Learning Rate!

Learning Rate: a hyperparameter that controls how much to change the model in response to the estimated error each time the model weights are updated.

$$\text{new_weight} = \text{existing_weight} - \text{learning_rate} * \text{gradient}$$

$$\text{new_weight} = \text{existing_weight} - \text{learning_rate} * (\text{current_output} - \text{desired output}) * \text{gradient}(\text{current output}) * \text{existing_input}$$

Deep Learning with Neural Network

Input: x = number of apple given by Lisa

Output: y = number of banana received by Lisa

Parameters: Need to be estimated

$$y = 4x - 4$$

Deep Learning with Neural Network

$$y = \overset{\text{pixel}(1,1)}{W_1} \overset{\text{pixel}(1,2)}{X_1} + W_2 X_2 + W_3 X_3 + W_4 X_4 + \dots + W_n X_n + b$$

3

Deep Learning for NLP

Single Neuron VS Multilayer

Application

Previous Word Embedding Models

Neural Net Language Model (NNLM)

- The first word embedding model!
- N – how many previous words will be checked
- Only care about the previous words
- Long Computation time! Really slow

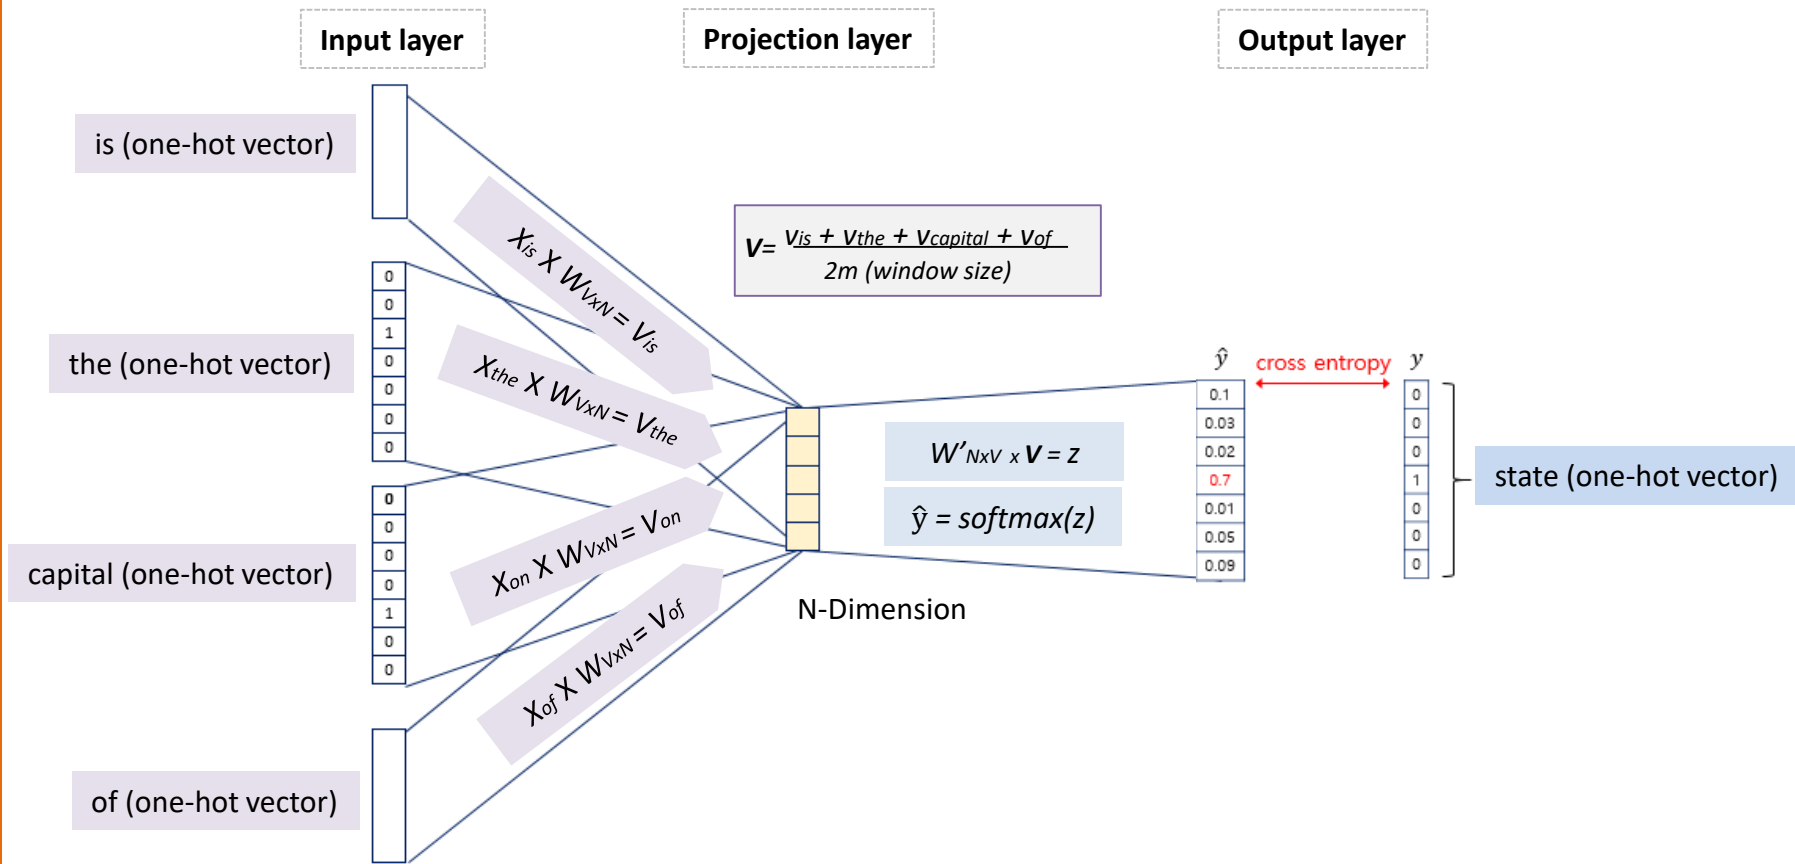

Recurrent Neural Net Language Model (RNNLM)

- No need to setup the No of previous words
- No projection layer
- Only care about the previous word
- A bit faster than NNLM

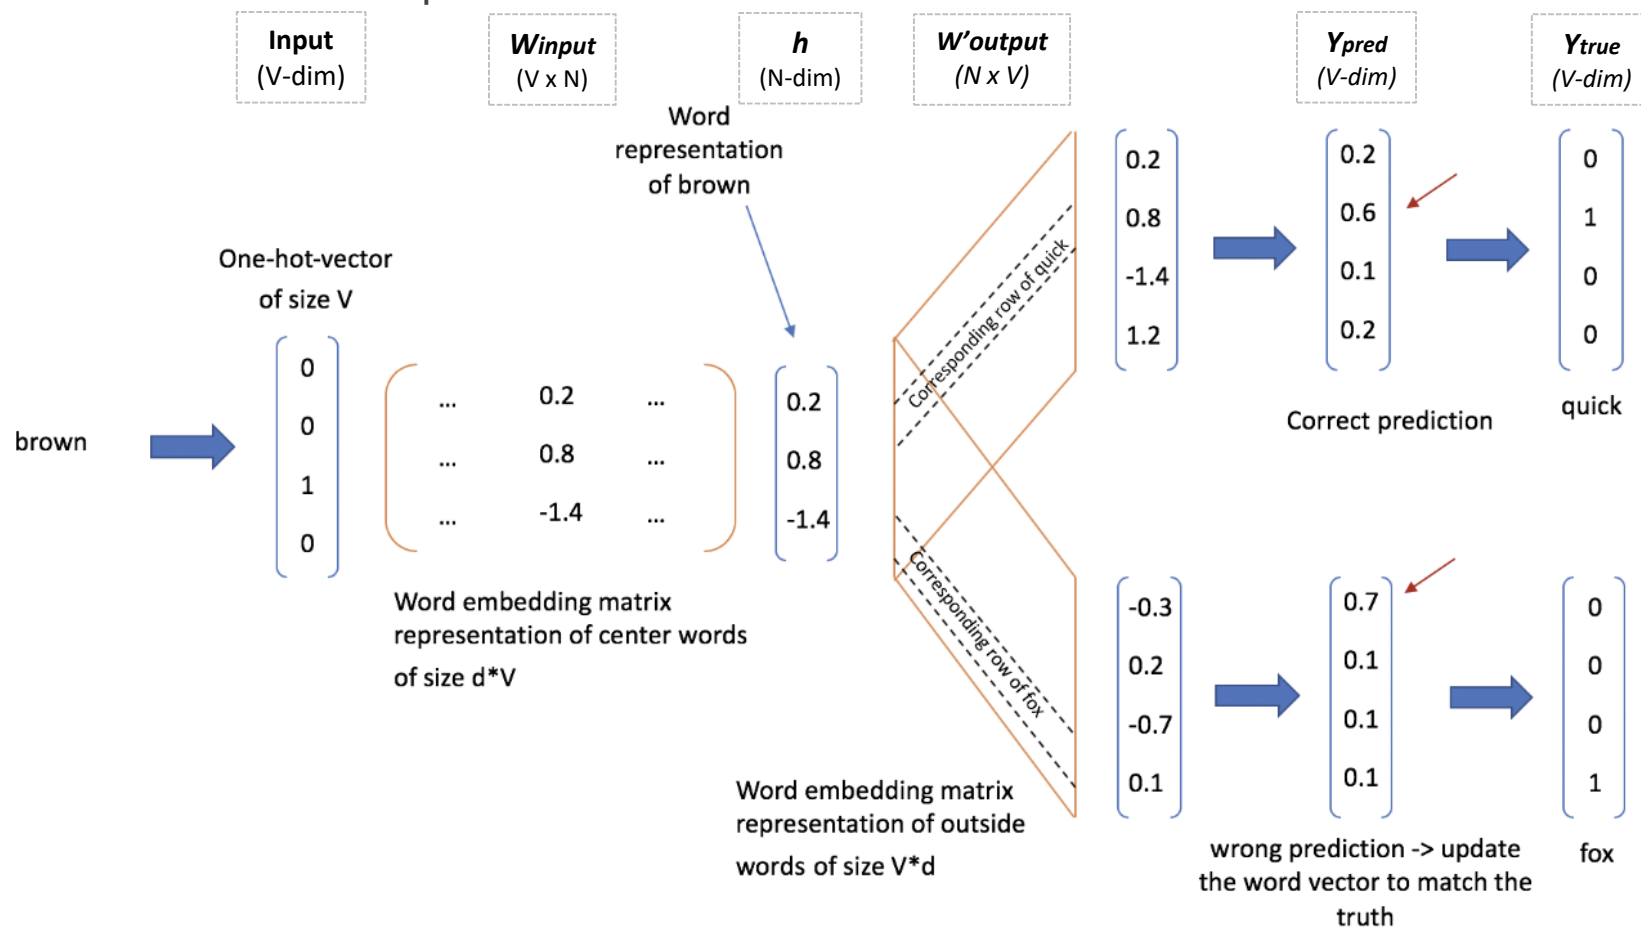

Application

Word2Vec with CBOW

Application

Word2Vec with Skip Gram

Negative Sampling

$$\text{new_weight} = \text{existing_weight} - \text{learning_rate} * \text{gradient}$$

(11X3)

Application

Application #1: Embedding Pretraining

Application

Application #2: Translation Rescoring

Lisa gosta de comer Macas e bananas **source**

Bart does to eat coconuts and bananas *translation#1*

Lisa likes to eat apples and bananas *translation#2*

Lisa dislikes to drink apples and bananas *translation#3*

Deep Learning for NLP

Application

Application #2: Translation Rescoring

Lisa gosta de comer Macas e bananas source

Deep Learning for NLP

Application

Application #2: Translation Rescoring

Lisa gosta de comer Macas e bananas source

Lisa
likes
to
eat
apples
and
bananas
translation#2

0.2 0.1 0.3

Deep Learning for NLP

Application

Application #2: Translation Rescoring

Lisa gosta de comer Macas e bananas source

Lisa likes to eat apples and bananas translation#2

0.2 0.1 0.3

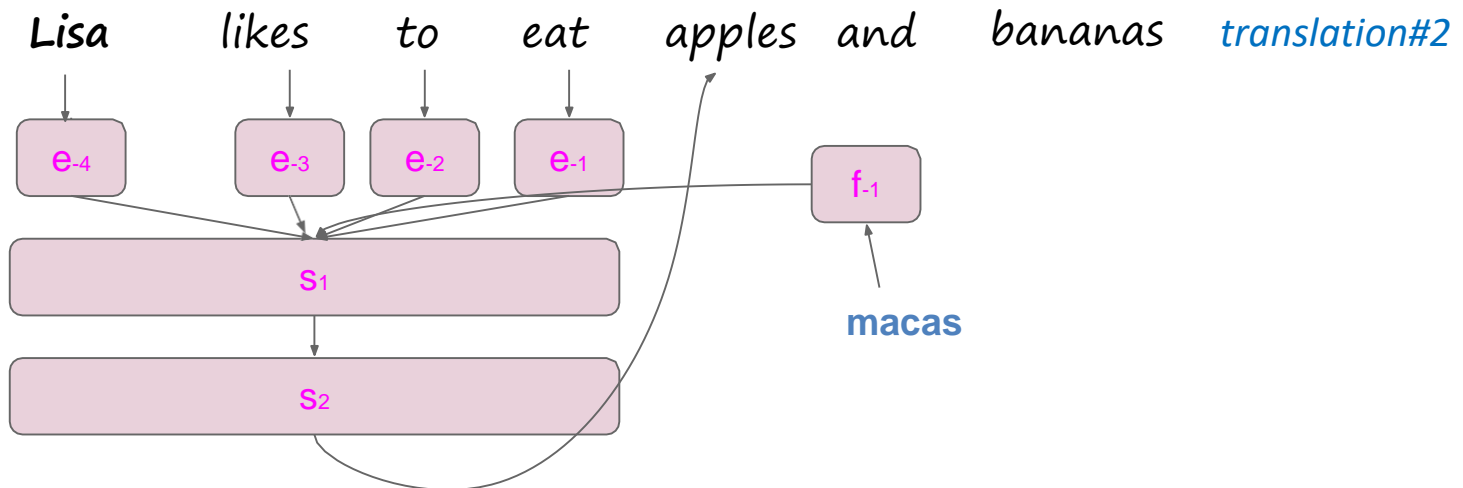

Deep Learning for NLP

Application

Application #2: Translation Rescoring

Lisa gosta de comer macas e bananas source

Application

Application #2: Translation Rescoring

Lisa gosta de comer Macas e bananas **source**

Bart does to eat coconuts and bananas 0.00003

Lisa likes to eat apples and bananas **0.000378**

Lisa dislikes to drink apples and bananas 0.00012

Lecture 3: Word Classification and Machine Learning

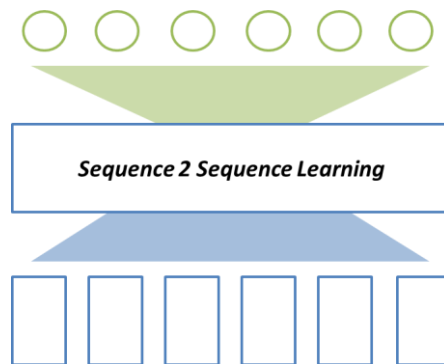

1. Previous Lecture: Word Embedding Review
2. Word Embedding Evaluation
3. Deep Neural Network for Natural Language Processing
 1. Perceptron and Neural Network (NN)
 2. Multilayer Perceptron
 3. Applications
4. **Next Week Preview**

See how the Deep Learning can be used for NLP

 - Text Classification, etc.

4

Next Week Preview

RNN Cell

-  Tanh function
- h_t new hidden state
- h_{t-1} previous hidden state
- x_t input
-  concatenation

LSTM

GRU
